### Are Statistics Reliable?

On Sept. 29, 2015, Republicans from the U.S. Congress questioned Cecile Richards, the president of Planned Parenthood, regarding the misappropriation of \$500 million in annual federal funding. The above graph/chart was presented as a point of emphasis.

The case started when the giant pharmaceutical company, Purdue Pharma, launched its new product OxyContin, which they advertised as a safe, non-addictive opioid that was highly effective for pain relief.

---

A very interesting graph was used to prove to doctors that the drug was non-addictive because it stayed on the patient's blood over time avoiding symptoms of withdrawal.

On August 6, 2020, Rachel Maddow of MSNBC tweeted “Chart: Kansas mask counties versus no-mask mandate counties” (Maddow [Citation2020](#), August 6) along with a link to a plot created by the Kansas Department of Health and Environment—which was also shared live on *The Rachel Maddow Show* that same day.

---

The plot compared the number of COVID-19 cases over time for counties in Kansas that had mask mandates versus those that did not.

## Kansas COVID-19 7-Day Rolling Average of Daily Cases/Per 100K Population

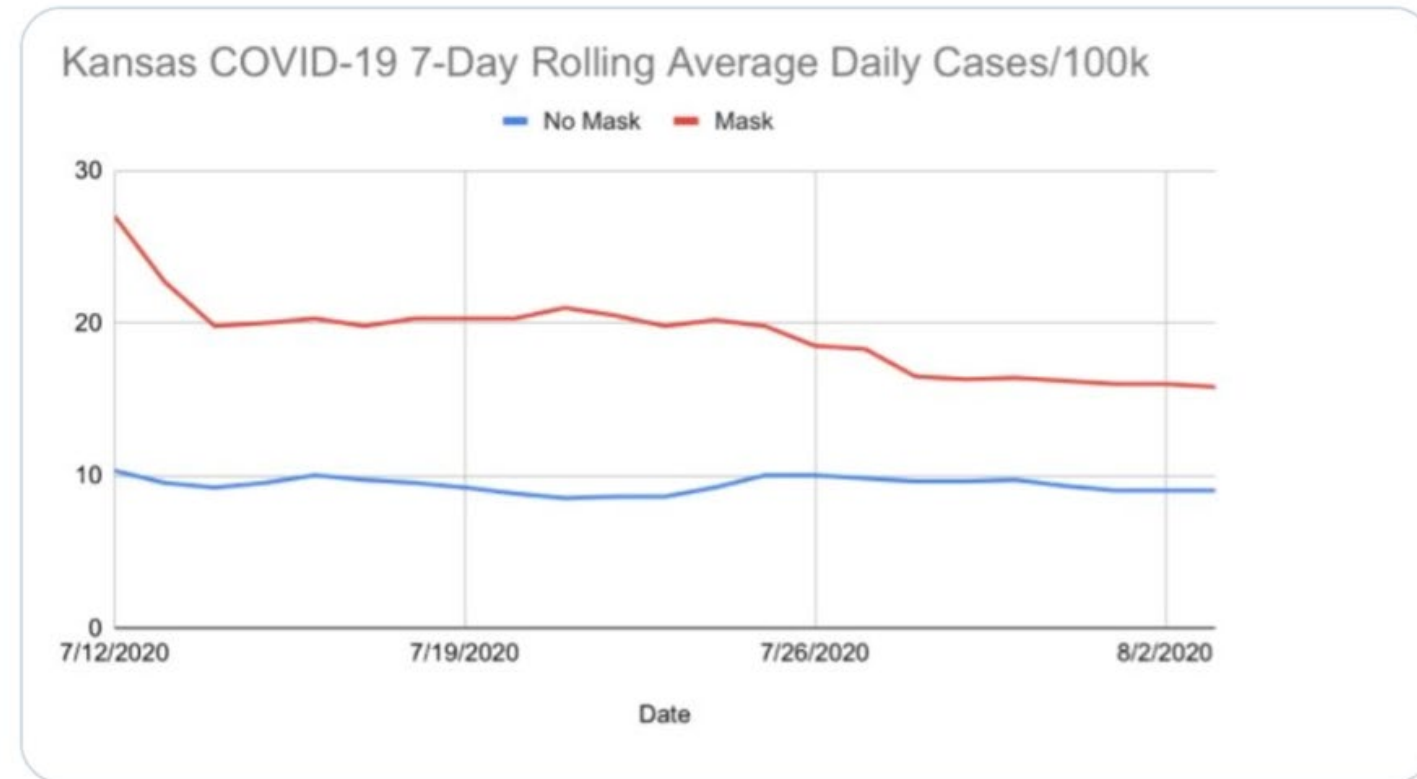

### Mask Counties Vs. No-Mask Mandate Counties

**Steven Strogatz** ✓ @stevenstrogatz · Aug 6

Here's what the graph looks like when plotted the usual way, i.e., on a single vertical scale that includes the origin (courtesy of @quantKid):

9

8

62

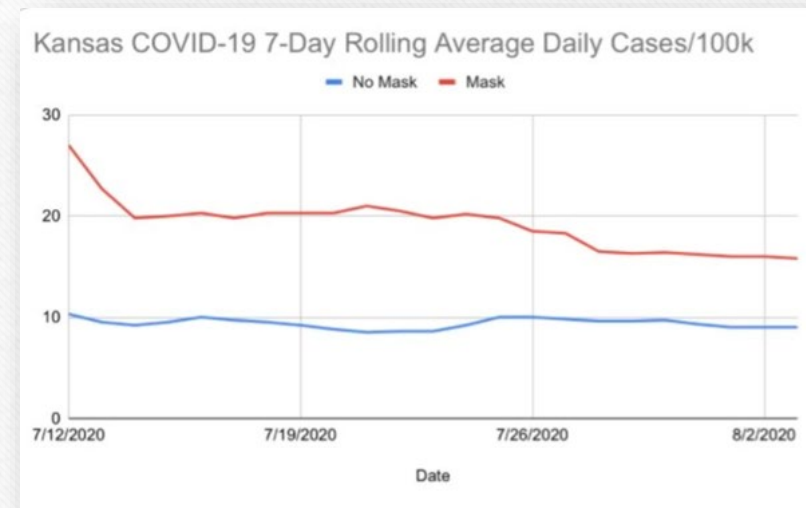

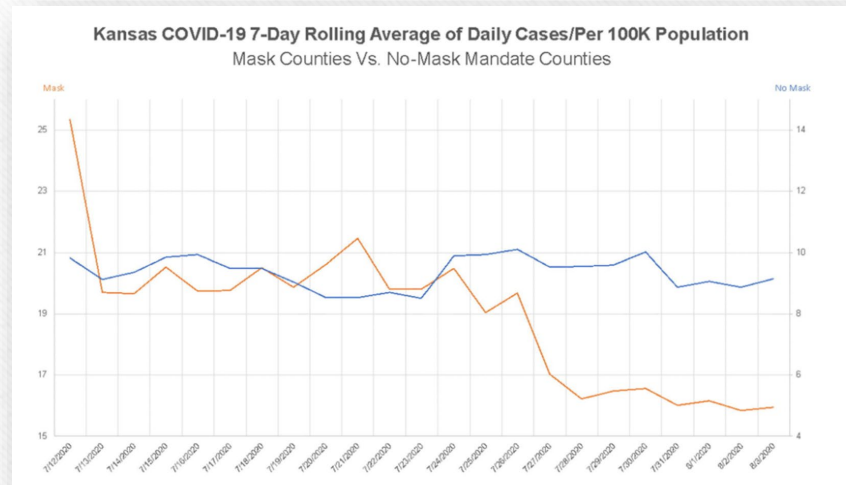

“

There are two take-aways when comparing the two plots.

**First**, although there was an obvious decline, the word “rapid” is not as justifiable—it is certainly less pronounced.

**Second**, without paying very close attention to the scales of the two vertical axes in the original plot, it would be easy to conclude that counties with mask mandates had dropped below that of those with no mask mandate—an incorrect conclusion.

”

When the Georgia Department of Public Health posted this plot (see [Figure 3](#)), it went viral because of what may have been intentional data manipulation.
